Recommandation iSGLT2 et MRC

Recommendation 3.7.1: We recommend treating patients with type 2 diabetes (T2D), CKD, and an eGFR ≥20 ml/min per 1.73 m^2 with an SGLT2i *(1A)*.

Practice Point 3.7.1: Once an SGLT2i is initiated, it is reasonable to continue an SGLT2i even if the eGFR falls below 20 ml/min per 1.73 m^2, unless it is not tolerated or KRT is initiated.

Practice Point 3.7.2: It is reasonable to withhold SGLT2i during times of prolonged fasting, surgery, or critical medical illness (when people may be at greater risk for ketosis).

Recommendation 3.7.2: We recommend treating adults with CKD with an SGLT2i for the following *(1A)*:

- **eGFR ≥20 ml/min per 1.73 m^2 with urine ACR ≥200 mg/g (≥20 mg/mmol), or**
- **heart failure, irrespective of level of albuminuria.**

Practice Point 3.7.3: SGLT2i initiation or use does not necessitate alteration of frequency of CKD monitoring and the reversible decrease in eGFR on initiation is generally not an indication to discontinue therapy.

Recommendation 3.7.3: We suggest treating adults with eGFR 20 to 45 ml/min per 1.73 m^2 with urine ACR <200 mg/g (<20 mg/mmol) with an SGLT2i *(2B)*.

Sodium-glucose cotransporter-2 inhibitor therapy in kidney transplant patients with type 2 or post-transplant diabetes: an observational multicenter study

Sodium-glucose cotransporter-2 inhibitors (SGLT2i) have cardioprotective and renoprotective effects. However, experience with SGLT2i in diabetic kidney transplant recipients (DKT) is limited.

Methods

Observational study

n = 339 DKT

Demographic, clinical and laboratory data

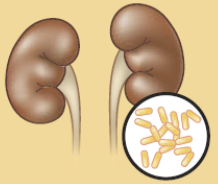
6 months' treatment

↓

Adverse effects (AE)

Results

AE – 26% ⟶ 14%



Risk factors for developing UTI

- Prior episode [OR 7.9 (CI 3.6–17.21)]
- Female sex [OR 2.5 (CI 1.2–5.0)]

6 months' efficacy

↓ Body weight	↓ Uric acid
↓ Blood pressure	↓ Urinary protein/creatinine ratio
↓ Fasting-glycemia	↑ Mg
↓ HbA1c	↑ Hemoglobin

Conclusion: SGLT2i offers benefits controlling weight, blood pressure, uric acid, Mg, glycemia and proteinuria. UTI was the most frequent AE and caution should be taken in female DKT and those with a history of UTI.

Intérêt des iSGLT2 en dialyse péritonéale ?

Expression SGLT2 par les cellules mésothéliales de la membrane péritonéales
Non modifiée par CKD ou DP
Mais augmentée dans péritonite sclérosante (cause? Conséquence?)

Inhibition SGLT2 voire SGLT2/1
Augmentation UF
Réduction inflammation péritonéal (modèles murins)

CASE REPORT Open Access

SGLT-2 inhibitors may increase ultrafiltration in incident peritoneal dialysis patients: a case report

Jia-Wen Lai[1], Hsuan-Jen Lin[1,2] and Che-Yi Chou[1,2,3*]

Study	Design	Participants	Intervention	Primary outcome
Hamdan et al[23]	Prospective interventional cohort study (pre-post)	Prevalent PD patients (N = 20)	Dapagliflozin 10 mg daily for 30 days	Changes in PET parameters
PRESERVE (NCT05250752)	Prospective interventional cohort study (pre-post)	PD patients (N = 10)	Dapagliflozin 10 mg daily for 3 days	D4/D0 ratio
EMPA-PD (NCT05671991)	Crossover randomized study[a]	PD patients with residual urine output ≥400 mL/24 h (N = 30)	Empagliflozin 25 mg (single dose) or placebo	Total glucose absorption
EMPOWERED[24] (jRCTs051230081)	Crossover randomized study	PD patients with heart failure (N = 36)	Empagliflozin 10 mg or placebo for 8 weeks	Change in daily UF volume from baseline
CANARY (NCT05715814)	Single-arm, open-label study	PD patients with residual renal function[b]	Empagliflozin 25 mg daily for 2 weeks	Change in measured GFR from baseline
RENAL LIFECYCLE (NCT05374291)	Randomized controlled trial	PD patients with residual urine output >500 mL/24 h (N = 100)[c]	Dapagliflozin 10 mg daily or placebo	Mortality or heart failure hospitalization

Efficacy and Safety of Dapagliflozin in Patients With CKD Stage 4-5

Study Design

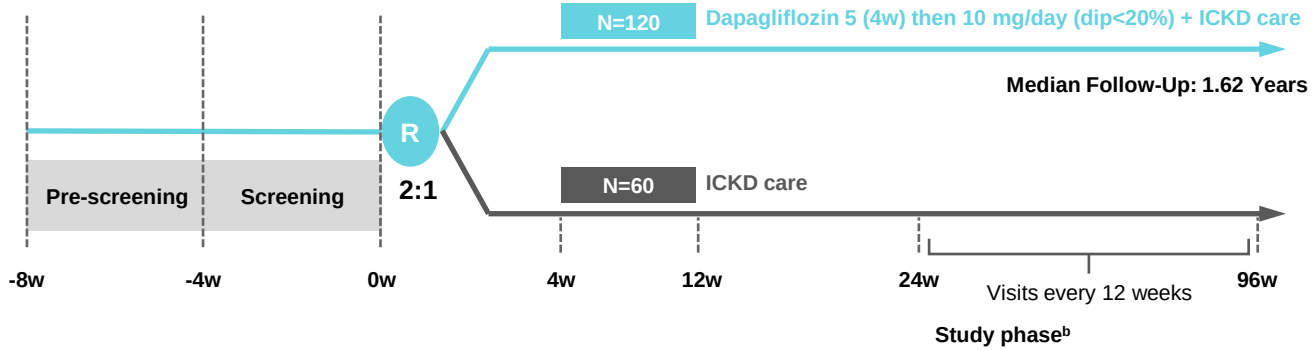
To assess the **efficacy and safety** of dapagliflozin in patients with CKD stage 4-5 under the ICKD care.

Key inclusion criteria:

- ≥20 years of age
- eGFR 10 to 30 mL/min/1.73 m^2
- eGFR decline ≥2.5 mL/min/1.73 m^2/year
- Pre-ESKD program ≥1 month before randomization

Key exclusion criteria:

- Lupus nephritis, ANCA-associated vasculitis
- Urinary tract obstruction, frequent urosepsis



Primary outcome
Difference of total eGFR slope after randomization

Secondary outcomes

- **Renal composite:** Sustained ≥50% eGFR decline, ESRD[c], and renal or CV death
- **Renal and HF composite:** Renal composite + hospitalization for HF and hospitalization for AKI
- **Renal and CV composite:** Renal and HF composite + 5p-MACEs[d]

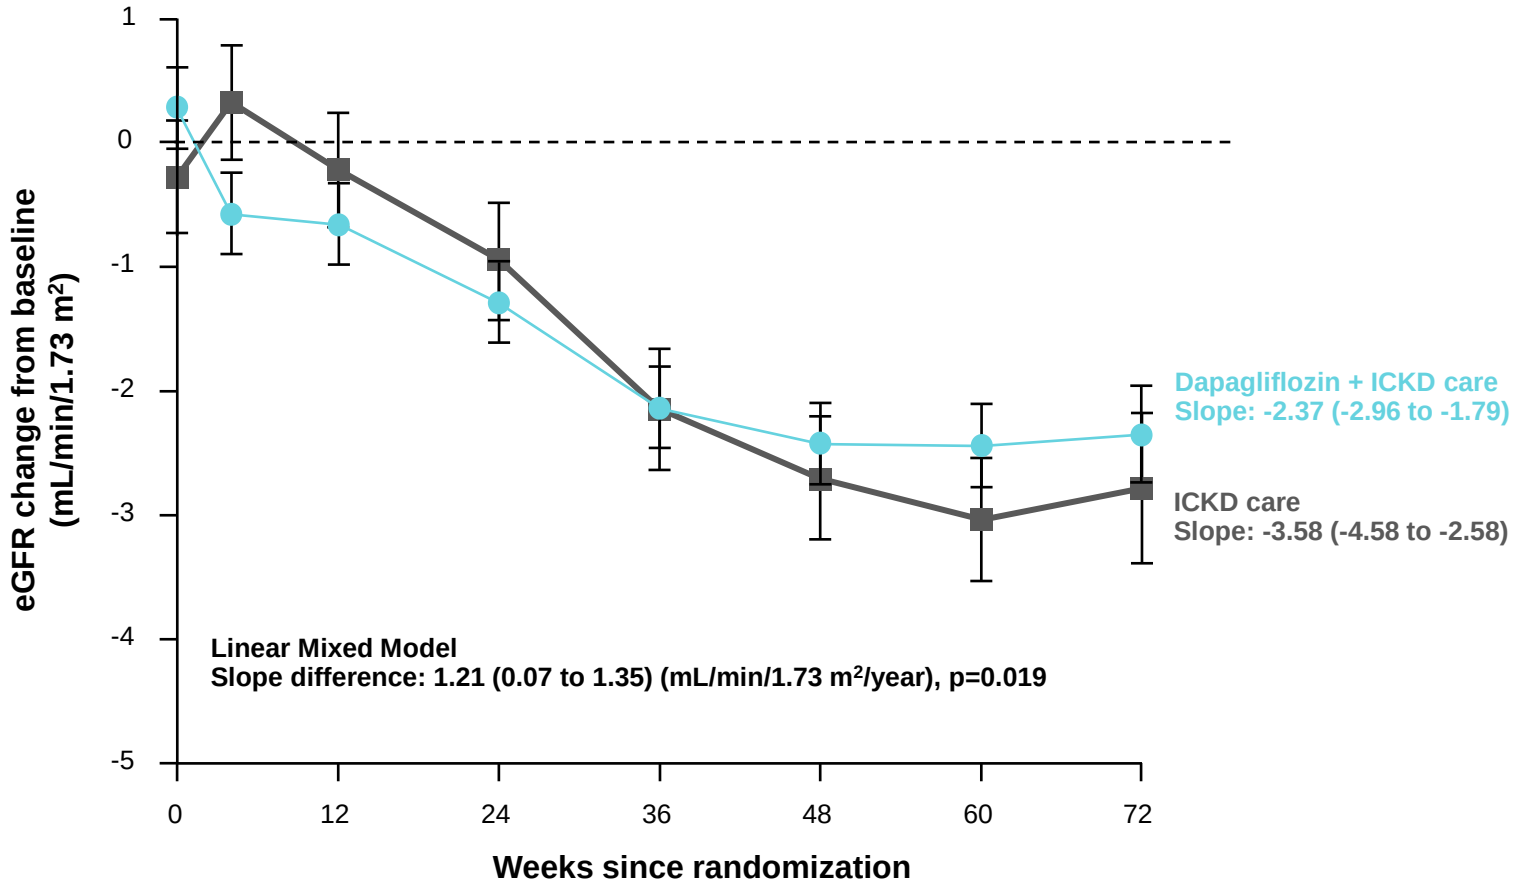
Safety
Serious AEs, discontinuation due to AEs, and CKD complications

Baseline Characteristics

Characteristics	Dapagliflozin + ICKD care (N=120)	ICKD care (N=60)
Age, years, mean (SD)	67.5 (11.7)	71.4 (8.3)
Female sex, no. (%)	41 (34.2)	27 (45.0)
Body mass index, kg/m^2, mean (SD)	26.1 (4.7)	25.8 (4.0)
T2D, no. (%)	63 (52.5)	32 (53.3)
Systolic blood pressure, mm Hg, mean (SD)	135.1 (13.2)	133.3 (18.4)
eGFR, mL/min/1.73 m^2, mean (SD)	18.9 (5.5)	19.7 (5.8)
eGFR <20 mL/min/1.73 m^2, no. (%)	69 (57.5)	32 (53.3)
eGFR slope, mL/min/1.73 m^2/year, median (IQR)	-5.4 (-9.1 to -3.4)	-5.5 (-9.9 to -4.0)
UPCR, mg/g, median (IQR)	1388 (554 to 2483)	963 (322 to 2046)
UACR, mg/g, median (IQR)	765 (320 to 1587)	609 (144 to 1221)
RAS inhibitors, no. (%)	72 (60.0)	33 (55.0)

Presented at: ASN Kidney Week; October 24-27, 2024; San Diego, CA.

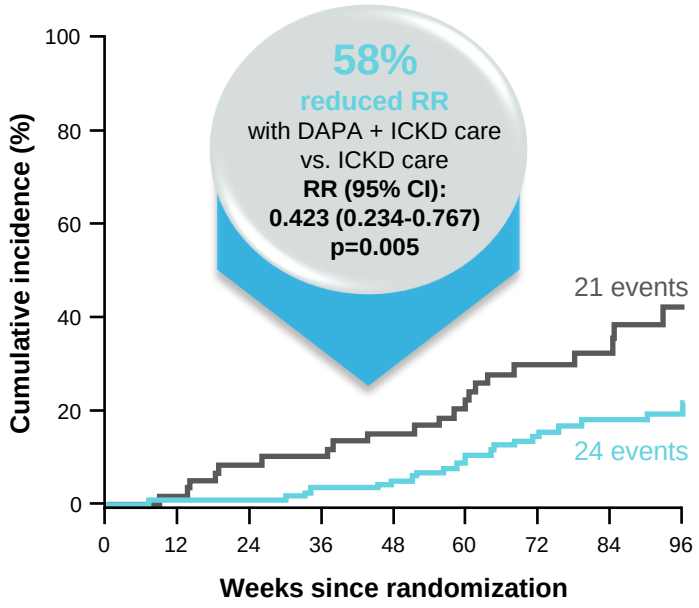
Primary Outcome: Difference of eGFR Slope



Presented at: ASN Kidney Week; October 24-27, 2024; San Diego, CA.

Kaplan–Meier Curve of Secondary Outcomes

Renal composite outcome



No. at Risk									
ICKD care	60	59	54	53	50	43	30	24	13
Dapagliflozin + ICKD care	120	118	118	114	111	96	82	62	36

- Sustained ≥50% eGFR decline,
- ESRD
- Renal Death
- CV death

Renal and heart failure composite outcome

	60	59	53	51	48	41	29	24	14
	120	117	115	111	109	94	81	61	35

- Renal composite
- Hospitalization for HF
- Hospitalization for AKI

Renal and cardiovascular composite outcome[a]

	60	58	53	51	49	42	30	25	14
	120	117	115	110	108	92	80	60	36

- Renal and HF composite
- MACEs

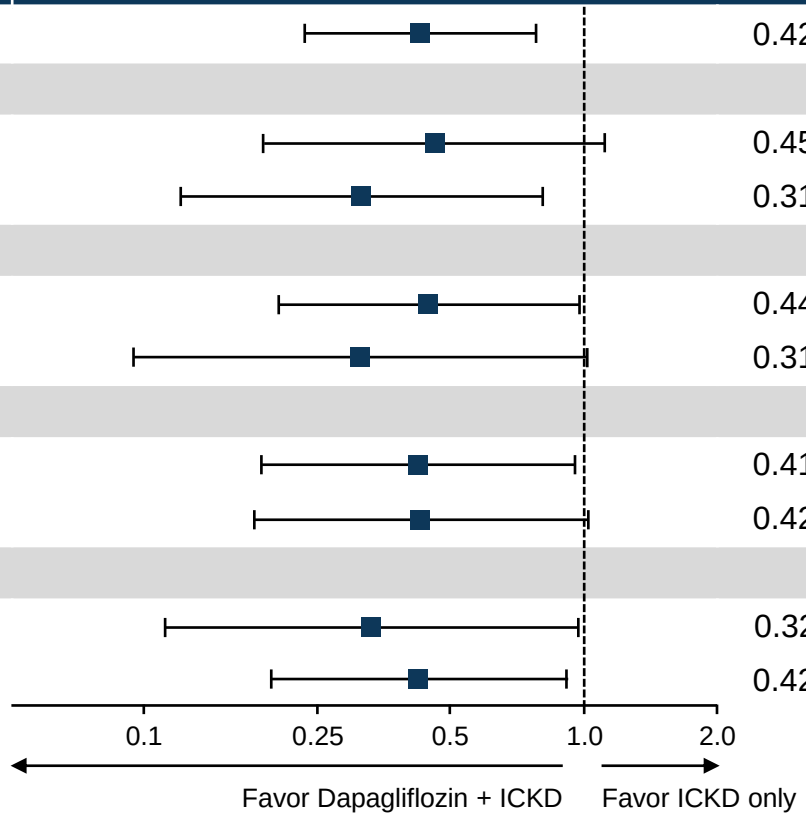
Safety Outcomes (Contd.)

Safety outcomes, no. (%)	Dapagliflozin + ICKD care with hard outcome (N=17)	ICKD care with hard outcome (N=17)	p-value
Non-fatal SAE led to hard outcome[a]			
AKI hospitalization	**1 (5.9)**	**7 (41.2)**	**0.039**
HF hospitalization	1 (5.9)	3 (17.6)	0.601
CKD fluid overload hospitalization	2 (11.8)	2 (11.8)	1.000
5p-MACE[b]	2 (11.8)	2 (11.8)	1.000

Presented at: ASN Kidney Week; October 24-27, 2024; San Diego, CA.

Subgroup Analysis of Renal Composite Outcome

Subgroup	Dapagliflozin + ICKD care	ICKD care	Hazard ratio[a] (95% CI)
	no. of events/no. of participants		
All participants	24/120	21/60	0.423 (0.234-0.767)
Age			
<70 yr	16/60	9/23	0.459 (0.187-1.120)
≥70 yr	8/60	12/37	0.313 (0.121-0.808)
Sex			
Male	19/79	13/33	0.447 (0.206-0.971)
Female	5/41	8/27	0.312 (0.096-1.010)
Type 2 diabetes			
Yes	13/63	11/32	0.419 (0.185-0.948)
No	11/57	10/28	0.428 (0.180-1.017)
Systolic blood pressure			
≤130 mm Hg	7/50	9/34	0.329 (0.112-0.968)
>130 mm Hg	17/70	12/26	0.422 (0.196-0.908)



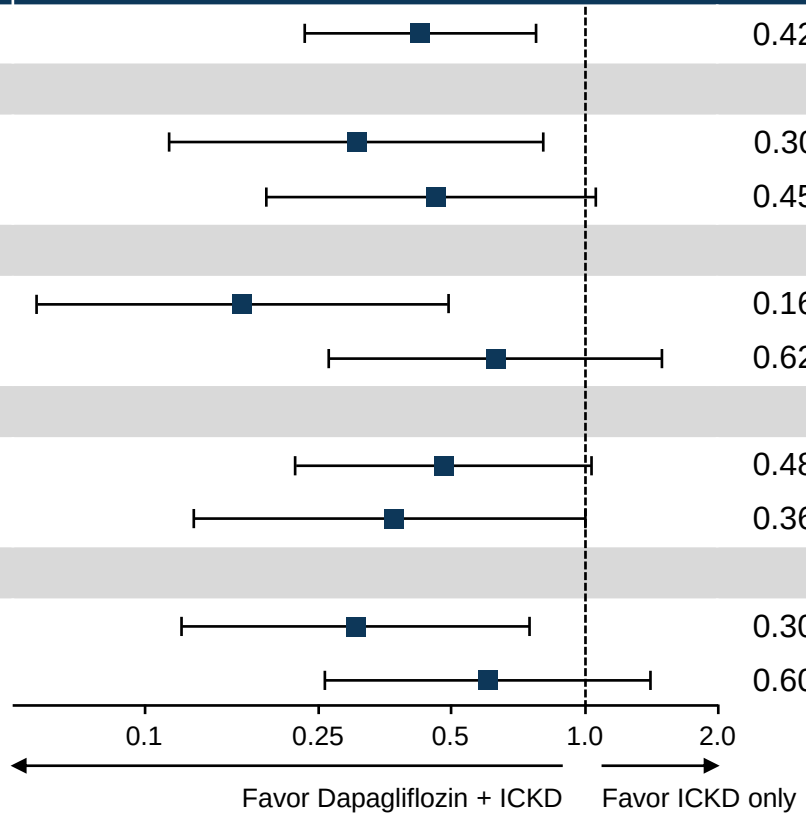
[a]Cox proportional hazard model stratified by diabetes, eGFR and baseline eGFR slope.

CI = confidence interval; eGFR = estimated glomerular filtration rate; ICKD = integrated chronic kidney disease.

Hung CC et al. Presented at: ASN Kidney Week ; October 24-27, 2024; San Diego, CA.

Subgroup Analysis of Renal Composite Outcome

Subgroup	Dapagliflozin + ICKD care	ICKD care	Hazard ratio[a] (95%CI)
	no. of events/no. of participants		
All participants	24/120	21/60	0.423 (0.234-0.767)
CKD stage			
Stage 4	7/82	11/42	0.303 (0.114-0.805)
Stage 5	17/38	10/18	0.456 (0.192-1.086)
UACR			
<1000 mg/g	8/67	12/39	0.167 (0.057-0.488)
≥1000 mg/g	16/53	9/21	0.629 (0.264-1.490)
Over-hydration (OH)			
Yes (OH ≥1 L)	16/59	12/29	0.481 (0.220-1.048)
No (OH <1 L)	8/61	9/31	0.365 (0.133-1.001)
RAS inhibitor			
Yes	9/72	11/33	0.302 (0.122-0.746)
No	15/48	10/27	0.609 (0.260-1.421)



[a]Cox proportional hazard model stratified by diabetes, baseline eGFR and baseline eGFR slope.

CI = confidence interval; CKD = chronic kidney disease; eGFR = estimated glomerular filtration rate; ICKD = integrated chronic kidney disease; OH = over-hydration; RAS = renin angiotensin aldosterone system; UACR = urine albumin-to-creatinine ratio.

Hung CC et al. Presented at: ASN Kidney Week ; October 24-27, 2024; San Diego, CA.

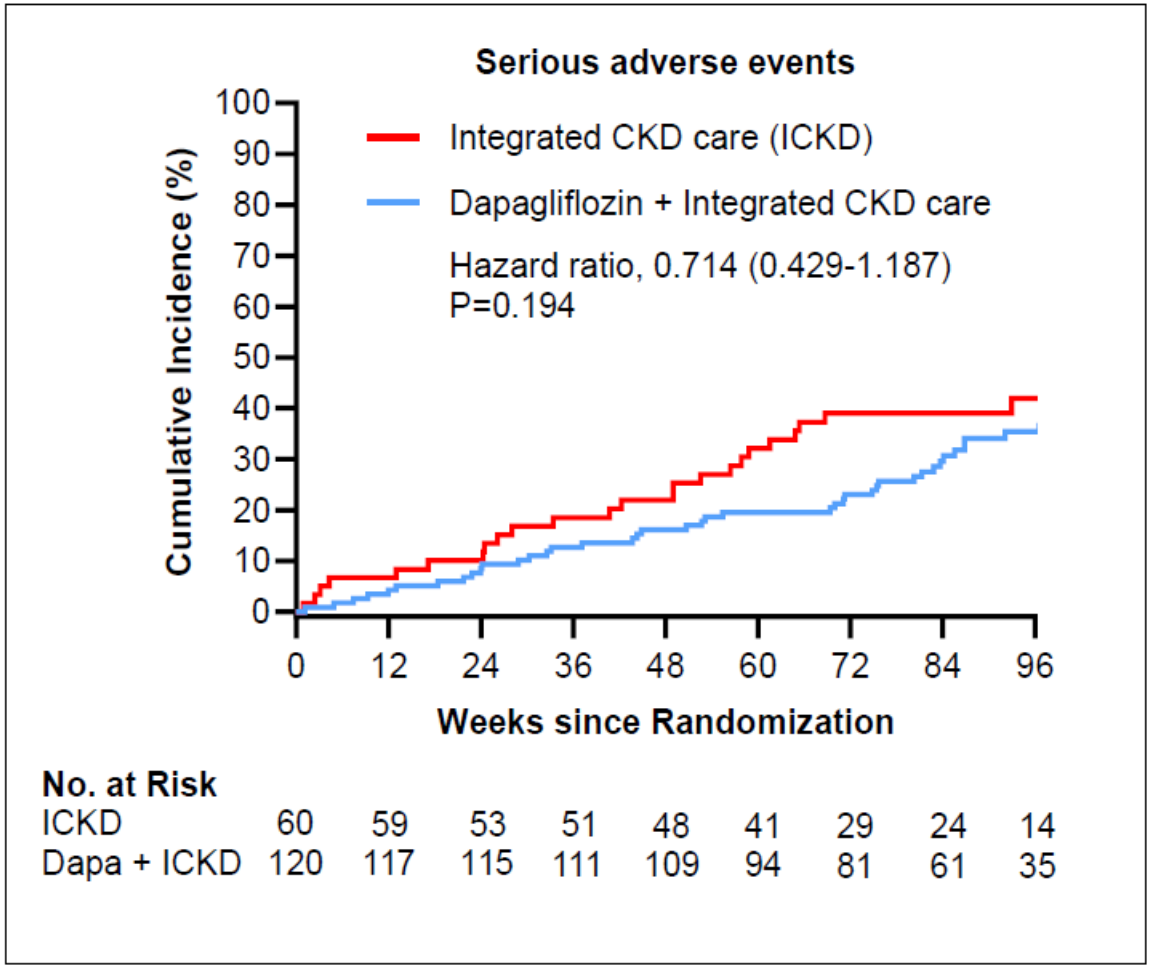
Safety Outcomes

Safety outcomes, no. (%)	Dapagliflozin + ICKD care (N=120)	ICKD care (N=60)	p-value
Serious adverse events	41 (31.2)	24 (40.0)	0.466
Discontinuation due to adverse events	3 (2.5)	-	-
Adverse events of interest			
Acute eGFR dip >30%	2 (2.5)	0 (0.0)	0.217
Volume depletion	1 (0.8)	1 (1.7)	0.615
Major hypoglycemia	1 (0.8)	1 (1.7)	0.615
Urinary tract infection with hospitalization	6 (5.0)	3 (5.0)	1.000
Diabetic ketoacidosis	0 (0.0)	0 (0.0)	-
CKD complications of interest			
Anemia and iron insufficiency			
Hemoglobin <9 g/dL	19 (15.8)	11 (18.3)	0.671
Iron saturation <20%	15 (12.5)	13 (21.7)	0.129
Ferritin >500 ng/mL	12 (10.0)	9 (15.0)	0.334
Electrolyte imbalance of interest			
Serum potassium >5.5 mEq/L	20 (16.7)	10 (16.7)	1.000
Uric acid >9 mg/dL	22 (18.3)	8 (13.3)	0.396

CKD = chronic kidney disease; eGFR = estimated glomerular filtration rate; ICKD = integrated chronic kidney disease.

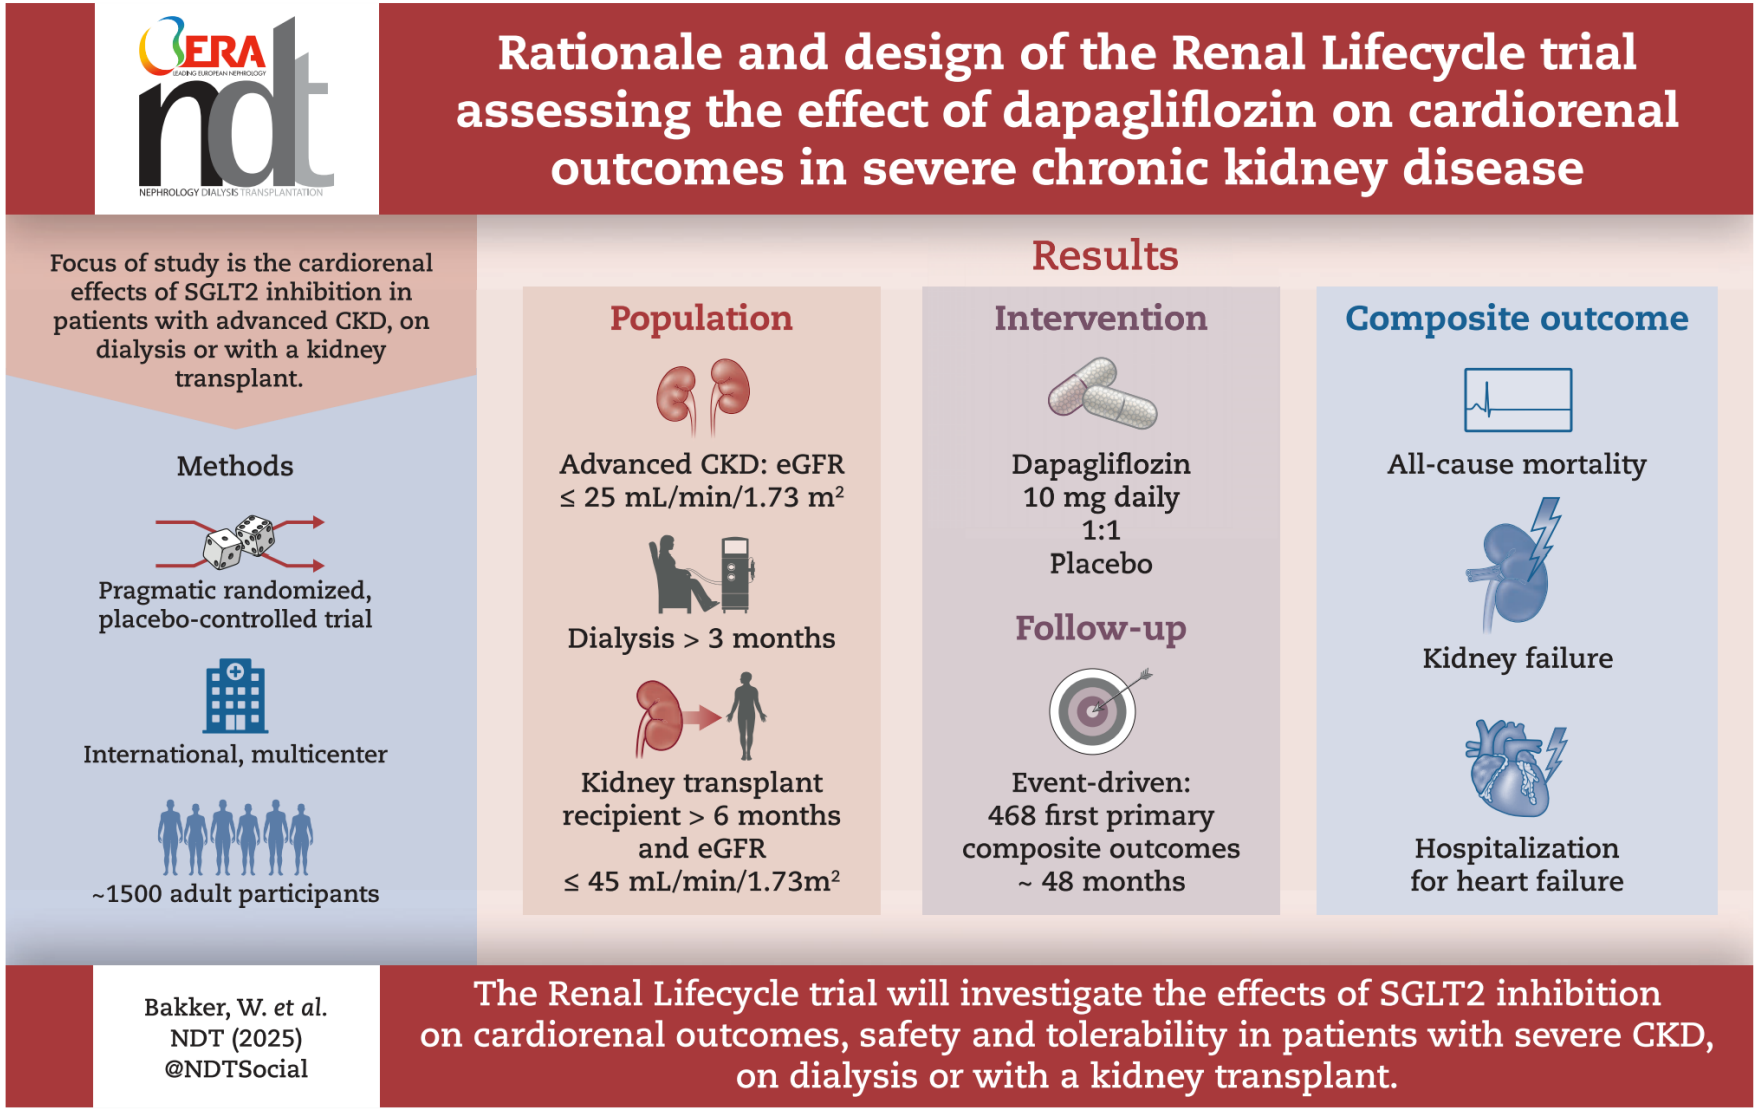
Hung CC et al. Presented at: ASN Kidney Week ; October 24-27, 2024; San Diego, CA.

Kaplan–Meier curve of safety outcome

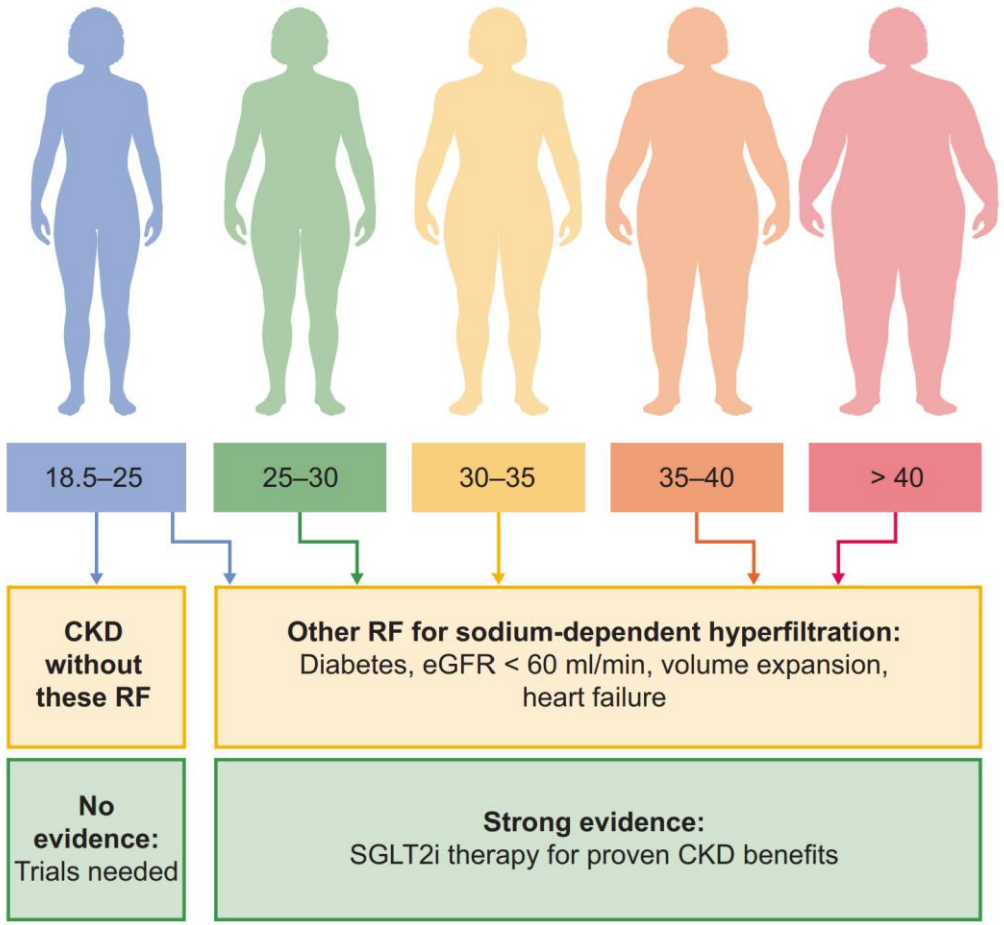


CKD, chronic kidney disease; Dapa, dapagliflozin; eGFR, estimated glomerular filtration rate; ICKD, integrated CKD care

Next step : essai clinique chez les patients en IRCT



Une autre population spécifique = la MRC du sujet sans surpoids non diabétique

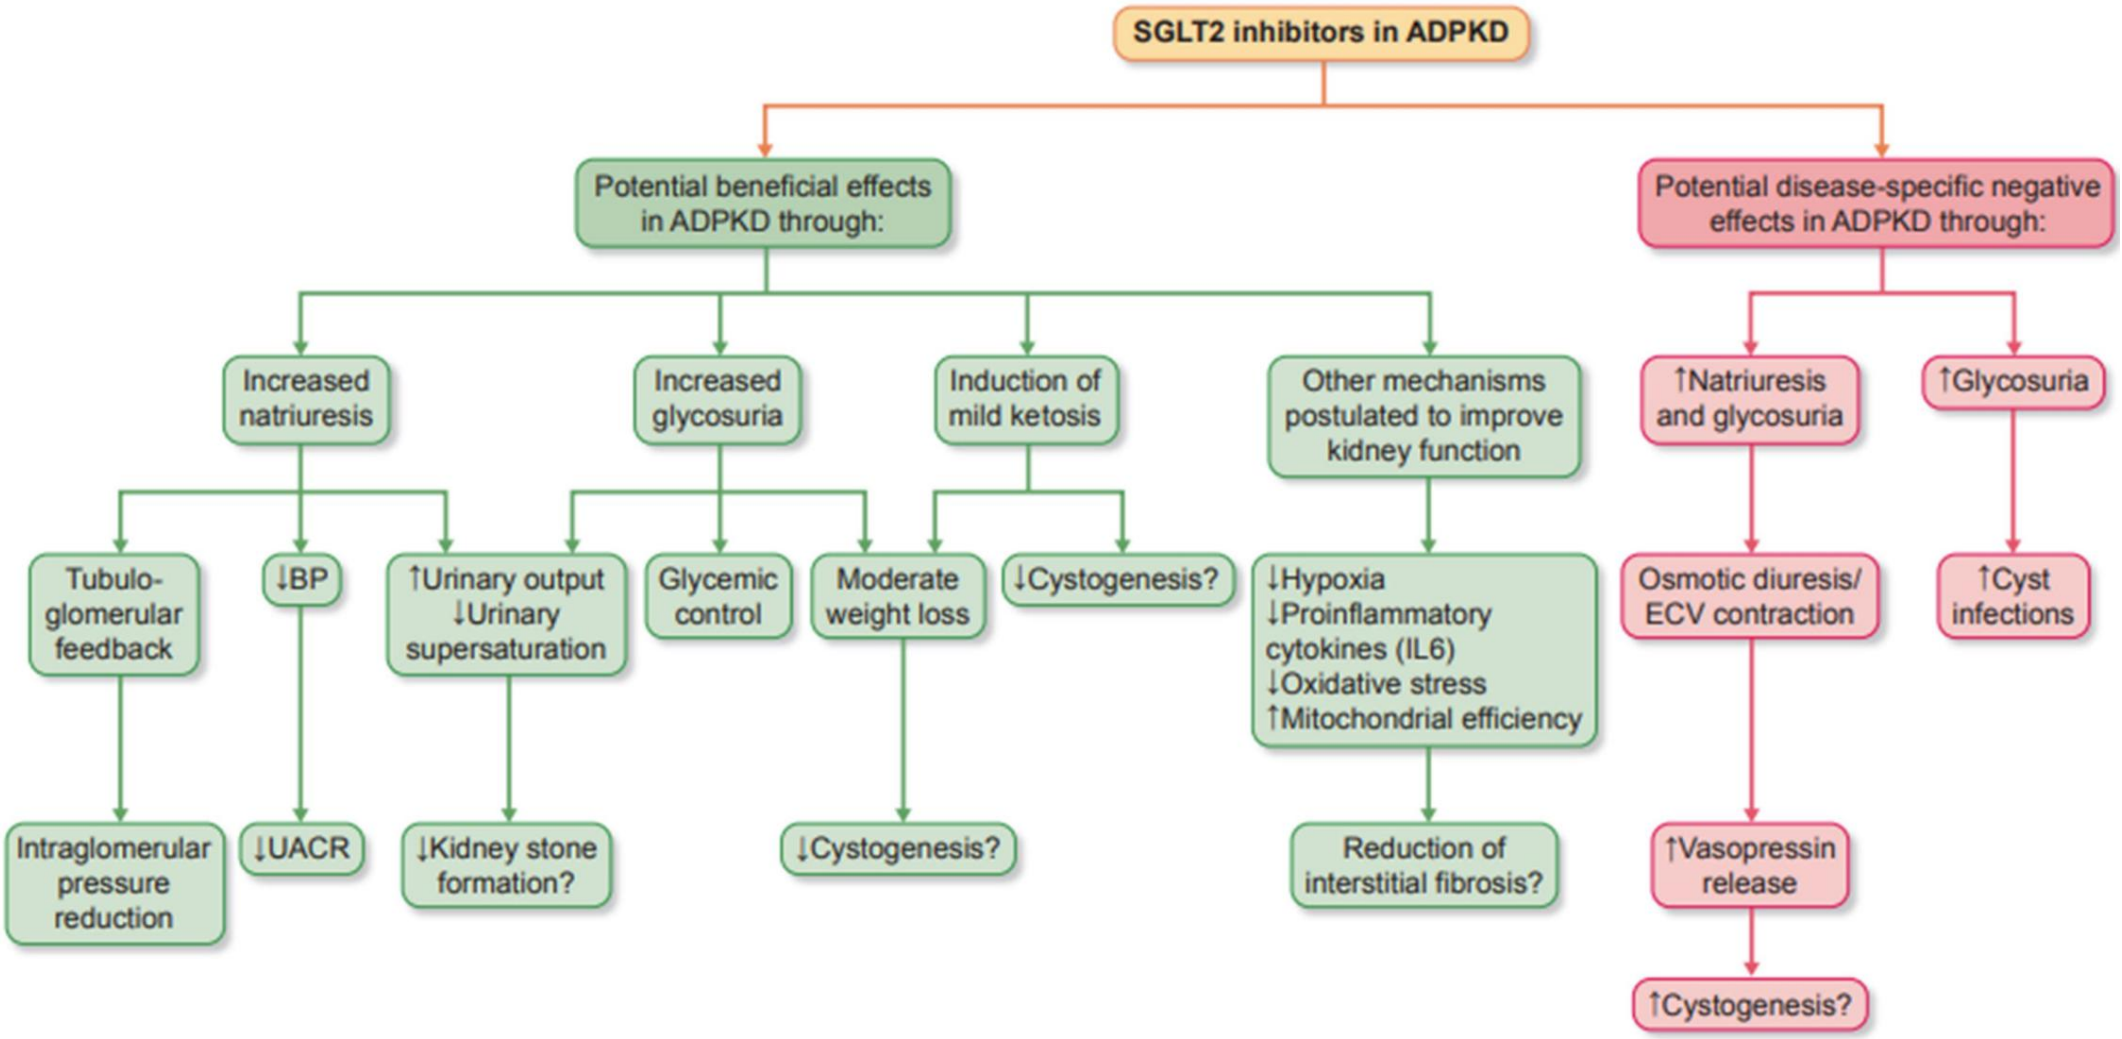


Populations avec hyperfiltration
et hypervolémie sur représentée dans les essais cliniques dont DAPA CKD et EMPA-KIDNEY

Autres mécanismes de progression
Génétique (PKR, Alport)
Inflammation
Toxiques

Romagnani NDT 2025

Une autre population spécifique = les polykystiques



Muller NDT 2025

Conclusion

La réduction de la mortalité et le ralentissement de la dégradation de la fonction rénale des patients MRC traités par iSGLT2 justifient leur évaluation dans les populations spécifiques non inclues dans les RCTs

- Spécificité = maladie
- Spécificité = stade d'Insuffisance rénale
- Spécificité = âge

} Quel objectif, quel critère de jugement?
